MEASURING GUIDE

Contact: (312) 800-8668 I Email: sales@dkcmail.com I Address: 1360 Landmeier Rd, Elk Grove Village, IL 60007

STEP 1

- *Begin by sketching out the overall shape of your kitchen including all walls, doors and windows.*

- *Measure the full width of each wall, corner to corner in inches. (e.g., a 6 foot wall = 72 inches)*

-*Take pictures of each wall to share with your designer.*

STEP 2

- *Measure the height and width of each door and window inlcuding the frame/moulding.*

- *Label each door and window on your drawing for clarity.*

- *Measure the height, width and depth of each appliance.*

- *Provide your designer with the make and model of each appliance to ensure everything fits correctly.*

STEP 3

- *Measure the ceiling height of the room in 2-4 places and use the smallest measurement.*

- *If you have soffits (the boxed area above cabinets), measure their height and depth.*

- *Confirm that all measurements add up to the width of each wall.*
